Qualifying Examinations in the Biochemistry & Molecular Pharmacology Graduate Program

A. Purpose and Scope
The purpose of the qualifying examination is to evaluate the student's progress in the graduate program and to determine the student's potential for successful completion of the Ph.D. requirements. The Qualifying Exam Committee (QEC) conducts this evaluation based on the student's performance in the core curriculum and advanced courses, performance in laboratory rotations, preparation and defense of an original research proposal, and general scientific knowledge and reasoning ability.

B. Exam Format
Preparation for the Exam
In order to take the Qualifying Exam in the Biochemistry & Molecular Pharmacology (BMP) Graduate Program, a student must have completed (or be currently completing) the required BMP coursework and have joined the laboratory of a BMP faculty member. Preparation for the Qualifying Examination involves selection of a Qualifying Examination Committee and a proposal topic. The student and their thesis advisor choose a Qualifying Exam Committee (QEC), which is then approved by the Graduate Director. The committee is to be composed of 3 GSBS members; the Chair must be a member of the BMP Graduate Program. The advisor is not a member of the Committee and is not present during its deliberations. However, the advisor can assist the student in developing the Specific Aims, which can be discussed at a joint meeting of exam committee members, student and advisor.

The student’s QEC should be submitted and approved by the Graduate Director by mid-January of the second year.

The Proposal
Students are encouraged to write a proposal that relates directly to their likely thesis research, although an unrelated topic may be chosen. The student will write a Specific Aims page in consultation with the research advisor. The properly formatted Specific Aims page is then submitted to the chair of the committee for preliminary approval. The Chair, in consultation with the other members of the committee, will determine whether the proposal topic and Specific Aims are appropriate or if revision is needed. The student and the chair may also choose to convene the QEC for a meeting to discuss the proposed Specific Aims.

Specific Aims Meeting (aka Abstract Meeting)
The goal of the Specific Aims meeting is for the QEC to review and discuss with the student the overall plan for the proposal. A critical function is to identify deficiencies in the plan that need to be addressed or changed in the final proposal. Another is to give the
student guidance as to the types of questions that might arise or the implications of the proposal that the student will need to be prepared to discuss. The Specific Aims meeting is not a seminar—do not plan an extensive presentation. The committee will have read your Specific Aims so you should give a brief introduction and summary: 4 – 6 slides that summarize the background and significance, the aims and hypotheses, and an outline of the experimental approaches that will be used to test your hypotheses. Your planned presentation should be brief: 5 – 10 minutes. The QEC may ask a few clarification questions during or after your presentation to make sure that everyone understands the overall plan for the proposal. In addition, the QE may suggest topics or issues that you should address in the written proposal or be prepared to discuss in the oral exam. At the conclusion of the meeting, the QEC will determine whether the Specific Aims are satisfactory or whether changes are required.

If the Specific Aims are well prepared, the meeting will be brief (e.g., 30 min). The meeting is not a miniature version of the QE; thus, it should never take longer than 1hr.

Four weeks following approval of the Specific Aims, the student will submit a research proposal with the format and page limitations described below. The proposal is to be prepared without consultation with committee members or the thesis advisor; however the chair of the committee can provide input on general approach and formatting issues. The student may consult with other faculty members, postdocs and students.

Formatting:

Font
Use an Arial, Helvetica, Palatino Linotype, or Georgia typeface, a black font color, and a font size of 11 points or larger. (A Symbol font may be used to insert Greek letters or special characters; the font size requirement still applies.)

Paper Size Page Margins and Line spacing
Use standard paper size (8 ½” x 11).
Use at least one-half inch margins (top, bottom, left, and right) for all pages.
Use single spacing with no more than 6 lines per inch.

Figures, Graphs, Diagrams, Charts, Tables, Figure Legends, and Footnotes
May be included in the Specific Aims section, but you must adhere to the Specific Aims and Research Strategy page limitations described on the next page. You may use a smaller type size but it must be in a black font color, readily legible, and follow the font typeface requirement. Color can be used in figures; however, all text must be in a black font color, clear and legible.

Headers and Footers
You should use the headers and/or footers for page numbers and to place your name on the proposal.

**ABSTRACT** – is meant to serve as a succinct and accurate description of the proposed work when separated from the proposal. State the proposal’s broad, long-term objectives and specific aims. Describe concisely the research design and methods for achieving the stated goals. This section should be informative to other persons working in the same or related fields and insofar as possible understandable to a scientifically or technically literate reader. In the **ABSTRACT**, avoid describing past accomplishments and the use of the first person.

**SPECIFIC AIMS** – State concisely the goals of the proposed research and summarize the expected outcome(s), including the impact that the results of the proposed research will exert on the research field(s) involved. List succinctly the specific objectives of the research proposed, e.g., to test a stated hypothesis, solve a specific problem, or challenge an existing scientific paradigm.

**RESEARCH STRATEGY** – Organize the Research Strategy in the specified order using the instructions provided below. Start each section with the appropriate section heading—Significance or Approach. Cite published experimental details in the Research Strategy section and provide the full reference in the Bibliography and References Cited section.

(a) **Significance**
- Explain the importance of the problem or critical barrier to progress in the field that the proposed project addresses.
- Explain how the proposed project will improve scientific knowledge, technical capability, and/or clinical practice in one or more broad fields.
- Describe how the concepts, methods, technologies, treatments, services, or preventative interventions that drive this field will be changed if the proposed aims are achieved.

(b) **Approach**
- Describe the overall strategy, methodology, and analyses to be used to accomplish the specific aims of the project—include how the data will be collected, analyzed, and interpreted.
- Discuss the expected outcomes and results
- Discuss potential problems, caveats, and alternative strategies and outcomes.
Regarding specific experimental methods – do not go into great detail describing the specifics of buffers, time courses, equipment to be used, etc. However, you are responsible for knowing how all methods work, as well as explaining their strengths and weaknesses if asked in the Oral Exam.

Preliminary Data – any recent or published data that the student has generated can be used to set up the Significance and Approach sections. However, this is not a necessary part of the proposal and the lack of Preliminary Data will not negatively impact the proposal or the oral exam.

BIBLIOGRAPHY & REFERENCES CITED – Provide a bibliography of any references cited, including title, authors, journal, year, volume, and page numbers.

The Oral Exam
The oral exam will take place approximately two weeks following submission of the proposal and no later than the end of the spring semester student's second year.

Before the oral exam begins, the Committee will meet briefly, in the absence of the student, to review materials related to the student's progress in the graduate program and the format of the oral exam. A typical exam will begin with a brief (10 to 15 min) presentation of the research proposal by the student describing the specific problem to be addressed, the experimental approach to be used, and interpretation of anticipated results. The initial presentation will generally proceed without questions from the Committee unless particular points require clarification. The Committee will then ask questions designed to evaluate the proposed research, familiarity with the scientific literature, scientific reasoning ability, and general knowledge of biochemistry. After a question period, the student is often asked to leave the examination room while the Committee discusses the progress of the exam and determines whether an additional question period is needed to complete the exam. After the exam is concluded, the student will be asked to leave the room while the Committee arrives at its decision. The Chair will inform the student of the Committee's decision, and a written report of the examination results will be submitted by the Chair to the Dean of the Graduate School.

C. Results of the Qualifying Examination – Pass, Revise, Retest or Fail

Pass – enter thesis research.

Revise – specific sections of the proposal are re-written and subject to approval by the committee with no need for an oral examination retest.

Retest – oral defense of specific areas or complete proposal must be completed within 2 weeks of original defense.

Fail – academic withdrawal from the GSBS program.
D. Qualifying Examination Schedule

Each step in the Qualifying Examination will be completed during the student's second year using the following suggested deadlines. Students are encouraged to begin the necessary arrangements well in advance of the suggested deadlines.
