CVD Translational Research Seminar Series

Tuesday, February 14, 2017

4-5:30 pm

Albert Sherman Center

AS9-2072 Conference Room

Please join us for a new monthly seminar series that will discuss the various mechanisms underlying coronary atherosclerosis and its major pre-disposing factors and the different ways by which this leading cause of morbidity and mortality can be prevented and effectively managed. Each of our monthly sessions will feature an experienced basic scientist and a clinician/public health researcher.

**“Hypercholesterolemia Increases
Colorectal Cancer Incidence by a miR101c-
dependent downregulation of Tet1 that
reduces Hematopoietic Stem Cell
Differentiation Towards NKT and $\gamma\delta$ T cells”**

FEBRUARY PRESENTER:

**Louis M. Messina, M.D.
Professor
Department of Surgery**
