September 2022 Over the Precipice Into a Post-Roe World

The September issue of *AJPH* features a special section on abortion and reproductive rights.

Select articles cover rights and access in the United States, abortion bans and economic risk, infrastructure, and telemedicine. Five previously published research articles on abortion are also reprinted in this issue.

Other research and perspectives published here address topics such as body-worn camera footage and police-administered naloxone, #MeToo in South Korea, screening for breast cancer, and more.

Statin Use for the Primary Prevention of Cardiovascular Disease in Adults: US Preventive Services Task Force Recommendation Statement

[Abstract](#) | [Full Text](#)

FREE   JAMA. 2022;328(8):746-753. doi:10.1001/jama.2022.13044

This 2022 Recommendation Statement from the US Preventive Services Task Force recommends that for primary prevention of cardiovascular disease (CVD) in adults aged 40-75 years who have ≥ 1 CVD risk factors, clinicians should prescribe a statin for those with an estimated 10-year CVD risk $\geq 10\%$ (B recommendation) and selectively offer a statin for those with an estimated risk of 7.5% to

<10% (C recommendation) and concludes that evidence is insufficient to assess the balance of benefits and harms of statin initiation for primary prevention of CVD events and mortality in adults ≥ 76 years (I statement).
