DATA INTERPRETATION: Based on what you have learned from the history and PE, list up to 3 diagnoses that might explain the patient's complaints. Do not list diagnoses that you have already ruled out. List your diagnoses from most to least likely. For some cases, fewer than 3 diagnoses will be appropriate. Then, enter the positive and negative findings from the history and PE (if present) that support each diagnosis. Do not include what you would or should have done if you forgot to do it, nor include something you did not do. There is no need to list history and PE findings that help rule out a diagnosis.
