UMass Department of Family Medicine & Community Health

Physician Opportunities – August 2014

The Department of Family Medicine and Community Health at UMass Medical School/UMass Memorial Health Care, working with its affiliates, is recruiting for a number of qualified family physicians to fill positions across its clinical and academic sites. We are experiencing continued growth, as well as development of programs related to primary care transformation, development of the Patient Centered Medical Home, and expansion of innovative academic programs to train the workforce of the future. Compensation for all positions includes base salary with productivity incentives and excellent benefits.

We are currently recruiting for physicians at the following health centers in Central Massachusetts. For information regarding any of these open positions, contact Carolyn Jacobs at Carolyn.Jacobs@umassmemorial.org or call 774-442-9412.

Barre Family Health Center

We are recruiting for a family physician to join our faculty practice which includes 10 family physicians and 12 family medicine residents (4,4,4), as well as integrated behavioral health providers, and physician assistants at Barre Family Health Center (BFHC) in Barre, MA. The health center has been a well established practice for over 40 years. It is the only rural residency training site in Massachusetts, and it serves as the sole provider of health care for the people of Barre and its 9 surrounding communities. BFHC is a residency teaching site for the UMass Worcester family medicine residency, and also hosts students in all 4 years of the UMass Medical School curriculum. Having completed a 3 year project with the Commonwealth of Massachusetts Executive Office of Health and Human Services on practice transformation, the health center is now embarking on a payment reform initiative with the Commonwealth. This is a full spectrum family medicine practice which includes OB, acute/urgent care and inpatient care at UMass Memorial Medical Center.
**Hahnemann Family Health Center**

We are recruiting for a family physician to join our faculty practice at the Hahnemann Family Health Center, an urban academic group practice located at the Hahnemann Hospital Campus of UMass Memorial Medical Center in Worcester, MA. The health center serves as a primary training site for family medicine residents in the UMass Worcester Family Medicine Residency Program, and includes opportunities to teach medical students in all four years of the medical school curriculum. The health center serves a diverse patient population with respect to ethnicity, age and socioeconomic status. Physicians provide full service reproductive options, family centered maternity care, and care for infants, children, adults, and elders across a number of community care settings. They also provide outreach care for an underserved population at Plumley Village Health Center, a small urban underserved practice developed in a local housing project, to long term care patients in a local facility, and to college students at three major colleges with teaching and academic opportunities for students in each of those settings. Care of adult medical patients and pediatric patients is office-based. Hospitalized patients are cared for by hospitalists. Good follow-up is ensured through an active care transition program.

**Fitchburg Community Health Center**

The University of Massachusetts Department of Family Medicine and Community Health and University of Massachusetts Medical School are seeking a Director of the Osteopathic Residency component of our dually accredited (MD and DO) Fitchburg Family Medicine Residency Program. The ideal candidate will be a DO trained Family Medicine Physician with several years of experience. Leadership skills, as well as strong OMT and teaching skills, are required.

The Fitchburg Family Medicine Residency has been a key source of compassionate care for the poor and underserved in North Central Massachusetts since 1978. Our team recently moved into a new facility and our care model is based on team-based multidisciplinary collaboration.
