## Randomizing Test Answers

Questions and answers within a Bb Learn test can be randomized to help discourage academic misconduct. This document outlines the process for Randomizing Answers on a single test attempt.

1. **Locate** the test you would like to randomize test answers, **Click** the down Arrow and **Select** Edit the Test Option.

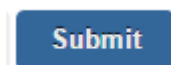

2. **Select** the Question Settings Button

3. **Scroll Down** to the Display Section. Here you will see the Option to Randomize Answers. **Click** the checkbox to randomize test answers.

4. **Click** Submit to save your changes.

**Please note:** You may wish to avoid specifying the randomization of answers when the answers include an “all/none of the above” statement.
