

# EpiServer Content Management System

## Saving Edits

### EpiServer saves your edits automatically with Autosave Timestamp

When you are working with a page, you can see it being saved through the **Autosave** function with a system-generated timestamp. Click **Undo?** to select the following options:

1. **Undo** to discard your changes on the page you are editing.
2. **Redo** if you discarded your changes through Undo and want to take them back. This option is only available if you have clicked **Undo** first.
3. **Revert to Published** to take you back the latest published version.
